

OBAID UR REHMAN

Full-Stack Developer · MERN / Next.js · AI Integration

Karachi, Pakistan | contact.obaidurrehman.dev@gmail.com | +92 308 2787558 | [GitHub](#) | [LinkedIn](#)

SUMMARY

Fresh Software Engineering graduate (2026) and full-stack developer who ships complete products end to end — database design through AI integration to production deployment. Built and deployed three full-stack applications, including a three-service AI recruitment platform running live across Vercel and Render, and led the Admin Command Center module of a three-member AI-powered marketplace FYP. Comfortable across REST API design, authentication, real-time systems, and integrating LLM features with fallbacks that keep the product working when the AI layer doesn't.

TECHNICAL SKILLS

Frontend: React 18, Next.js 14 (App Router), Vite, Tailwind CSS, responsive/mobile-first UI, Recharts

Backend: Node.js, Express, REST API design, JWT auth (httpOnly cookies, bcrypt), Multer, Zod validation

Data: MongoDB Atlas, Mongoose schema design, aggregation, indexing

AI / Python: FastAPI microservices, sentence-transformer embeddings, cosine similarity, scikit-learn, LLM API integration (Gemini / Claude), structured-JSON prompt design

Real-time & Deployment: Pusher, Socket.io, GitHub REST API, Vercel, Render, MongoDB Atlas, Git/GitHub, environment-based config

PROJECTS

Firaasat — AI Intelligence Layer for Multi-Vendor E-Commerce — *Final Year Project, team of 3 · MERN, Claude API* [Live](#) [Code](#)

- Owned the Autonomous Admin Command Center module end-to-end (frontend, backend, testing) within a 3-person MERN team, alongside a Seller Growth Copilot and a Universal Buying Assistant.
- Built transparent, formula-based risk scoring (weighted additive, 0–100), fraud-ring detection (shared phone/address clustering), and anomaly/surge detection — replacing manual, one-by-one moderation.
- Built an AI-drafted dispute-resolution assistant (Claude API) that only suggests a resolution; every decision touching money or account status still requires explicit admin approval. Contributed to 40 passing Jest/Supertest tests and a ~65% client bundle-size reduction.

TalentMatch AI — Explainable AI Recruitment Platform — *Solo build · React, Node.js, FastAPI* [Live](#) [Code](#)

- Designed a three-service architecture — React/Vite frontend, Node.js/Express API, Python FastAPI AI microservice — deployed live across Vercel and Render with MongoDB Atlas.
- Built a weighted, fully explainable scoring engine (semantic matching via sentence-transformer embeddings) returning a plain-English breakdown instead of a black-box score, with a fuzzy-matching fallback for resilience.

TaskFlow — Real-Time Team Task Management — *Solo build · Next.js 14, MongoDB, Pusher* [Live](#) [Code](#)

- Built a Trello-style Kanban app where every task move, edit, and comment syncs instantly across all connected team members via Pusher.
- Implemented JWT auth in httpOnly cookies with bcrypt and role-based, server-side authorization on every board-scoped endpoint and real-time channel.

Scholar Pizza — Restaurant Ordering Platform — *WhatsApp checkout · MongoDB* [Live](#)

- Built and deployed a complete ordering product (60+ items, size-based pricing, COD/Easypaisa/JazzCash) with orders persisted to MongoDB before WhatsApp handoff, so no order is ever lost.

EXPERIENCE

SEO Specialist · 1.5+ years

- Owned organic-growth outcomes for client websites — keyword strategy, technical audits, and content optimization — building the user-behavior instincts that now inform how I design product interfaces.

EDUCATION

BS Software Engineering · Sindh Madressatul Islam University, Karachi · 2022 – 2026

Final Year Project: Firaasat — A Trust-Driven AI Intelligence Layer for Multi-Vendor E-Commerce (Supervisor: Dr. Kamlesh Kumar)
